How To Ask Good Questions

It is important to teach kids how to ask good questions in school so they can confront the false teachings of evolution they are receiving.

What's the evidence?

A person doesn't have to be sassy to ask a teacher to furnish proof of the concepts and theories they are teaching. It's a sign of intelligence to want to understand the facts and to learn the truth of a matter. It's all a matter of the tone of your voice and the intention of your heart. If you are asking because you want to embarrass the teacher, prove them wrong, or to prove you're smarter than they are, then the thoughts and intentions of your heart are not according to the ways of the Lord. But, if you are asking because you really want to (1) make sure you understand your teacher's way of thinking and (2) to help your teacher come to the realization that he or she may not really know the basis of their own understanding, then the Holy Spirit can do His work. "The Spirit of truth...will guide you into all truth" (John 16:13).

Remember, you're not the Holy Spirit. Your job is just to plant the seeds of doubt in the mind of your teacher so that he or she might start to investigate the truth of the matter on their own. So, all you are to do is ask the questions...lots of questions.

- What is the evidence for the earth being billions of years old?
- What is the evidence for man evolving from apes?
- How did the fish survive while they were developing arms and legs? How did they escape from their enemies?
- How did the birds survive while their wings were turning into arms and hands? How did they feed themselves?
- Hasn't radiometric age dating been proven to be unreliable?
- Darwin said the fossil record would eventually prove him right with transitional forms of life, where are they?

The whole concept of evolution is that older life comes out of chaos (the big bang theory). Common sense as well as proven laws of physics show this is not possible without the intervention of a Designer. Order does not come from chaos:

An explosion in a junk yard won't produce a car.

Leave a pound of hamburger out in the back yard and a cow won't emerge.

Don't try to supply the answers. Just try to get your teacher to realize he or she doesn't really know how to justify his or her teachings (because there is no proof!) The only logical conclusion is to trust what the Bible says and to rely on the fact that God says what He means and means what He says. His track record is perfect so far!
